

## Assignment Submission – Himanshu Sharma (2110990620)

I have successfully completed my Full Stack Development assignment. The project is live, and the code is available on GitHub.

Please note that environmental variables are not hidden in the project, as I used several of them for ease of access. To set up the project, simply download it and run the following command:

1. `npm i`

On the login page, you can log in with any email address as there is no backend connection (just ensure the **email includes the "@" symbol**).

For the Google Translate feature, I utilized **a free API**, which may sometimes return inconsistent results.

In the FAQ section, you may notice a delay in card creation. This is due to the middleware I used for image uploads, specifically **Multer**, which takes time to handle both uploads and deletions. I kindly ask for your consideration regarding this.
